Introducing British Steel

British Steel is a world leader in the production of steel with facilities across the UK and France, supplying high quality steel products around the world.

What makes us different is our approach to business. We build collaborative relationships that create new success for our customers, delivering a wide range of products and services either direct to end users or through our extensive stockist network.

We offer guidance and solutions to our customers from the very early design stage to deliver real benefits through optimisation of fabrication and process routes.

Steel types and grades	9
Dimensions and properties	10-11

Introduction to steel bulb flats

Bulb flats are the most cost-effective, efficient and corrosion-resistant solution for plate stiffening requirements. Key advantages include an excellent strength to weight ratio delivering buckling resistance at a lower weight than with flat bars or angles.

The rounded edges of the bulb profile mean there is no need for edge grinding prior to painting, saving time and money during fabrication. Paint degradation and the build up of corrosive debris is also reduced, extending life performance.

Traceability

At British Steel, we have complete control of our products from receipt of raw iron ore at our port facility, through our blast furnace & concast steel production, to being rolled into the final product at our mill, in the north east of England. Each bulb flat bar has a unique bar identity which allows complete traceability from steelmaking to the finished product.

We hold a wide range of Ship Society Classification Approvals giving our customers the confidence that their fabrication will be using steel components in full compliance with the relevant industry approval standards.

Our production facilities are certified to ISO9001 and ISO14001.

Dimensions

Width, b (mm)	160-430
Thickness, t (mm)	7-20
Length (m)	6-16.5*

*Short cuts and longer lengths up to 18m available on request.

Email: specialprofiles@britishsteel.co.uk

Services

- Bulb flats can be shotblasted, to SA2.5, and primed using a range of industry standard pre-fabrication primers for enhanced fabrication performance and product protection.
- Grinding of bulb flats for improved weld edge and width tolerances, making automated fabrication quicker and more accurate.
- Flexible and regular rolling programme of all our products to offer closer project schedule adherence.
- Local representation from our network of international offices.

Enhanced paint protection

Bulb flats are manufactured with rounded edges, eliminating the need for the labour-intensive and costly grinding process needed to meet new International Maritime Organisation guidelines and enhancing paint adherence for reduced corrosion.

Bulb flat steel

Uniform paint thickness provides longer lasting protection against degradation.

Alternative steel for plate stiffening

Square edge results in uneven paint distribution therefore offers limited protection against degradation.

Steel types and grades

Special Profiles operations are in accordance with ISO9001:2008
British Steel also have approval of the world's leading classification societies such as:
ABS, BV, DNV and LRS. Other societies available on request.

Our on site LRS inspection and mode 1 approval means material ordered to standard specifications can be available for despatch approx 2 weeks from date of rolling, 3 weeks for all other societies.

Below is a list of sample grades we regularly produce.

Shipbuilding steels

Strength	Grade	
Normal	A, B	Orange
	D	Orange
	E	Black
High strength	A32	Black
	D32	Black
	A36	Orange
	D36	Orange
	E36	Black

Grades that are held in bloom stock, readily available to roll in the next available capacity

The following grades are within our capability and steel is made to order

Other grades may also be available upon request.

Additional project specs may be considered for larger volume orders

Structural steels

Euronorm	Grade

Dimensional tolerances

1.0 Dimensions

1.1 Width

Width b, (mm)	EN10067 Standard	Special 1	Special 2
$\geq 160 \leq 180$	$\pm 2.0\text{mm}$	$\pm 2.0\text{mm}$	$\pm 1.5 \text{ mm}$
$\geq 180 \leq 300$	$\pm 3.0\text{mm}$	$\pm 2.2\text{mm}$	$\pm 1.7 \text{ mm}$
$\geq 300 \leq 430$	$\pm 4.00\text{mm}$	$\pm 3.0\text{mm}$	$\pm 2.0 \text{ mm}$

Our special width tolerances are achieved through an offline 100% weld edge grinding process. This ensures clean flat edges for superior welding.

Even closer tolerances may be accepted after special agreement.

1.2 Thickness

Thickness **t** tolerances for different widths ranges.

Width b, (mm)	EN10067 Standard	Special 1
$\geq 160 \leq 180$	-0.3 / + 1.0mm	-0.2 / + 0.6mm
$> 180 \leq 300$	-0.4/ + 1.0mm	-0.3 / + 0.6mm
$> 300 \leq 430$	-0.4/ + 1.2mm	-0.3 / + 0.6mm

1.3 Length

Closer tolerances may be achieved by special agreement.

Length, L	EN10067 Standard
All	-0 / + 100 mm

Individual lengths between 6m and 16.5m are available as a standard stackable length. Lengths outside this range (1.5m to 18m) may be available on request on a limited tonnage basis.

1.4 Straightness - bow and camber

As measured over the length of the bar.

Length	EN10067 Standard	Special 1	Special 2
$L \leq 18\text{m}$	$q \leq 0.0035 \times L$	$q \leq 0.0025 \times L$	$q \leq 0.00125 \times L$

1.5 Twist

The permissible degree of twist is given as the following:

Length	Standard	Special 1
All	0.5°/m	0.35°/m

Twist can be difficult to measure and is easiest to measure converted into Torsion by measuring the Torsion **T** in mm and applying the following calculations:

Torsion, T (mm) = width (mm) x sin tol degree, x length (M)

Torsion: $T = b \times \sin 0.35^\circ \times L$ - Special steel 1

Torsion: $T = b \times \sin 0.5^\circ \times L$ - Standard steel

Length, L	6m		10m		12m		15m		18m	
Permitted twist	0.35°	0.5°	0.35°	0.5°	0.35°	0.5°	0.35°	0.5°	0.35°	0.5°
Width, b (mm)	Torsion, T (mm)									
160	5.86	8.38	9.77	13.96	11.73	16.75	14.66	20.94	17.59	25.13
180	6.60	9.42	11.00	15.71	13.19	18.85	16.49	23.56	19.79	28.27
200	7.33	10.47	12.22	17.45	14.66	20.94	18.33	26.18	21.99	31.42
220	8.06	11.52	13.44	19.20	16.13	23.04	20.16	28.80	24.19	34.56
240	8.80	12.57	14.66	20.94	17.59	25.13	21.99	31.42	26.39	37.70
260	9.53	13.61	15.88	22.69	19.06	27.23	23.82	34.03	28.59	40.84
280	10.26	14.66	17.10	24.43	20.52	29.32	25.66	36.65	30.79	43.98
300	11.00	15.71	18.33	26.18	21.99	31.42	27.49	39.27	32.99	47.12
320	11.73	16.75	19.55	27.92	23.46	33.51	29.32	41.89	35.19	50.26
340	12.46	17.80	20.77	29.67	24.92	35.60	31.15	44.51	37.38	53.41
370	13.56	19.37	22.60	32.29	27.12	38.75	33.90	48.43	40.68	58.12
400	14.66	20.94	24.43	34.91	29.32	41.89	36.65	52.36	43.98	62.83
430	15.76	22.51	26.27	37.52	31.52	45.03	39.40	56.29	47.28	67.54

1.6 Flatness

The flatness tolerance **h** is 0.3% of the bulb flat width **b** and is measured as shown below.

Flatness tolerance: $h \leq 0.003 \times b$

The bulb flatness tolerance of the heel is **n** measured as shown below with a 2mm maximum.

Bulb flatness tolerance: $n \leq 2.0 \text{ mm}$

1.7 Shape

The dimensions **s** and **f** are measured as illustrated above.

Bulb head corner tolerances s

Thickness	Tolerance
$t \leq 9 \text{ mm}$	$s \leq 2.0 \text{ mm}$
$9 < t \leq 13 \text{ mm}$	$s \leq 3.0 \text{ mm}$
$t > 13 \text{ mm}$	$s \leq 4.0 \text{ mm}$

Bulb head corner tolerances f

Thickness	Tolerance
$t > 7 \text{ mm}$	$f \leq 0.75 S$

The dimension **r₁** is measured as illustrated above.

Bulb head corner tolerances radius r₁

Radius of curvature of corners
r₁ for thickness

Thickness	$r_1 \leq$
$5 < t \leq 9$	2.0mm
$9 \leq t < 13$	3.0mm
$13 \leq t \leq 20$	4.0mm

The dimension **e** is measured as illustrated above.

Web edge tolerances e

Thickness	EN10067 - Standard
$t \leq 9 \text{ mm}$	$e \leq 2.0 \text{ mm}$
$9 < t \leq 13 \text{ mm}$	$e \leq 3.0 \text{ mm}$
$t > 13 \text{ mm}$	$e \leq 4.0 \text{ mm}$

Tighter tolerances may be available on request through grinding of the web edge.

The dimension **w** is measured as illustrated above.

Web edge tolerances angle w

Thickness	Tolerance
$t \leq 9 \text{ mm}$	$w \leq 4^\circ$
$9 < t \leq 13 \text{ mm}$	$w \leq 4^\circ$
$t > 13 \text{ mm}$	$w \leq 4^\circ$

Tighter tolerance on web edge tolerance **e** and angle **w** may be available on request through offline grinding of the web edge.

Surface condition

The surface requirements and repair conditions for shipbuilding profiles are in accordance with EN10163-3:2004, subclass 3, class C. Maximum permissible depth of discontinuities and grinding allowance below minimum specified thickness are given in the table below:

Nominal thickness of the Product, t	Maximum permissible depth of discontinuities (mm)
$3 \leq t < 6$	20% of t
$6 \leq t < 20$	1.2
$20 \leq t < 40$	1.7

Requirements for blast-cleaned and primed material

The material can be delivered in blast-cleaned and primed condition in accordance with EN10238:1996. The standard supply conditions are as follows:

Preparation grade:	Sa 2½
Surface roughness:	M (medium in acc. with ISO 8503-2)
Dry film thickness:	$20 \mu\text{m} \pm 5 \mu\text{m}$
Types of primers:	British Steel have painting facilities capable of applying a wide range of primes and can accommodate most customers preferred paints.

Dimensions and properties
